SULFOCATIONIC EXCHANGE RESINES ON BASIS OF
POLYBUTADIENES. [1960] 6p. 9 refs.
Order from LC or SLA m\$1.80, ph\$1.80 61-10395

Trans. of *Zhur[nal] Priklad[noy] Khim[ii] (USSR)
1960, v. 33 [no. 3] p. 690-694.

Sulfocationic resins, with an exchange capacity of 1.4 to 3.2 m equiv/g, were produced through sulfonation of synthetic polybutadiene rubber and of its vulcanizates, containing 2, 10, 18 and 26% of tied sulfur. The ionites swell weakly, are chemically stable and have a sufficient mechanic solidity and thermal stability. Potentiometric titration of the ionites showed that they contain weakly acid, apparently hydroxylic groups. The exchange capacity in acid and in alkaline media diminishes linearly with the raise of reticulation degree in the initial polymers. Selectivity in hydrogen-cation exchange raises with the increase of polymers' degree (Chemistry--Analytical, TT, v. 5, no. 4) (over)
